RE: Remaining information

Monday, July 24, 2017 7:22:22 AM

During our July 13th presentation, Chemours reported on the various actions it has undertaken to respond to the detection of C3 dimer acid in the Fayetteville Works facility's effluent channel near outfall 002 after Chemours diverted its monomers scrubber wastewater to off-site incineration. These actions included cleaning various tanks and sumps and diverting certain sumps as explained during our July 13th presentation.

I learned recently of internal analytical results of new samples taken on July 18th and July 19th from the effluent channel near outfall 002 that indicate, following the investigative and remedial actions taken by the Company, that there is no detectable C3 dimer in the effluent above our internal laboratory's level of detection of 2 ppb. I also understand that the July 18th and July 19th samples were taken after the Fayetteville Works facility had completed the actions we discussed during our July 13th presentation and represent current operating conditions at the facility.

A split of the July 19th sample was also sent to Test America and we are awaiting Test America's results of this sample. We will send you Test America's results once we receive them

Best Regards,

Kathy

Hi Rose.

I am glad to hear that my June 28th letter answered some of your questions. Please find below the addresses of the sites mentioned in paragraph 3 of my June 28th letter.

- Chamber Works: Route 130, Shell Road, Deepwater, New Jersey, 08023 Washington Works: 8480 DuPont Road, Washington, WV, 26181 Experimental Station: Route 141, Henry Clay, Wilmington, DE 19880

I need to confer with others here at Chemours who are more knowledgeable about these locations in order to respond to your request for additional information regarding how the PMN substances are used at the 3 locations above.

I will overnight you the July 13th presentation as CBI and I will include a copy of Attachment 2 from the fax sent June 28th.

Best regards

Kathy

Subject: RE: Remaining information

1 think that the June 28th information addresses the sites and where the two PMNs are sent (2015 and 2016) but could include more information about specifically what they are used for at those sites and the addresses of those sites. For instance, the Consent Order does not mention one of the sites

Also, Attachment 2 of the June 28th fax has black boxes where something is written but was not legible in the fax. If you need clarification, perhaps a brief phone call would help later this afternoon or tomorrow morning. I wasn't sure about the extent of CBI in the fax.

Thanks in advance. Rose

PS have you submitted the slides from the July 13th Conference Call?

Rose Allison, Team Leader

Subject: Remaining information

Hi Kathy, When should we expect the remaining information that we asked for concerning where the PMN materials are sent and if there are other uses and amounts? Please let me know. If you need to discuss, please feel free to call.
